### **Trubolt + Receives Evaluation Report from ICC-ES**

Addison, IL---Trubolt +, manufactured by ITW Red Head, received an evaluation report (ESR#--2427) from ICC Evaluation Service, Inc. (ICC-ES), providing evidence that the high-strength fully threaded stud body (plated carbon steel), expansion clip, nut and washer exceeds code requirements. Building officials, architects, contractors, specifiers, designers and others utilize the ICC-ES Evaluation Reports to provide a basis for using or approving Trubolt + in construction projects following the International Building Code.

ICC-ES President Mark Johnson explains why ICC-ES Evaluation Reports are so important. “Red Head can now reference the evaluation report to assure building officials and the building industry that the product meets I-Code requirements,” Johnson said. “Building departments have a long history of using ICC-ES evaluation reports, and ICC-ES operates as a technical resource for the building department. Final approval of building products is always in the hands of the local regulatory agency.”

ICC-ES thoroughly examined Red Head’s product information, test reports, calculations, quality control methods and other factors to ensure the product is code compliant.

Red Head now manufactures and markets a full range of seismic wedge anchors with unique performance attributes. This new generation anchor technology was developed by testing tension and shear at the same time, the true forces in a seismic event!

ICC-ES is the United States’ leading source of technical information on building products and building technology for code compliance. A nonprofit, public-benefit corporation, ICC-ES performs technical evaluations of building products, components, methods and materials. The evaluation process culminates with the issuance of reports on compliance with the major U.S. building codes, which are available at [www.icc-es.org](http://www.icc-es.org).

*The ICC-ES article on Red Head’s Trubolt + has been attached for review.*
